How Agile is impacting software stacks with Dan DiCamillo Tuesday, November 15, 2016 5:30 PM

ModevSeattle

Capital One Investing

83 King Street, 6th Floor, Seattle, WA

Meetup agenda:

Our November meetup will be held at Capital One Investing in Pioneer Square and we'll have technical programming, followed by networking and great food courtesy of Capital One. Free, registration required.

Special thanks to Capital One for hosting!

How Agile is impacting software stacks

With Dan DiCamillo: Lean, Agile, & DevOps Coach, Getty Images

Being an effective developer requires more than writing clean code. It also requires current and broad knowledge of your problem and solution domains to determine where to apply code, and the pursuit of acquiring this knowledge on your own and through others.

In this session, we'll explore agile's impact on software stacks touching on Open Source, Microservices, Deployment Pipelines, Containers, Clouds, Clusters, and Feature toggles.

This session will build on Dan's presentation at the Code Writers Workshop earlier this month. However, those who weren't present at the Code Writers Workshop will still get a lot out of this event. Join us!

Schedule:

5:30: arrive, networking, enjoy great food & drinks
6:00-7:00: program
7:00-8:00: networking and more tasty food & drinks

About Dan:

"I've been fortunate enough to work with high performing software teams at IBM, REI, and now Getty Images as a Developer, ScrumMaster, Product Owner, Coach, and Manager. These experiences and a belief in what's still possible, fuel my desire for improvement and sharing. If we don't get to work together, you may bump into me at a meetup, conference, or helping organize BeyondAgile, Seattle Scaled Agile, and DevOpsDays Seattle."
